

Durability vs. Sustainability: The Case of the Stanley Quencher

Present to: Yann Cornil, David Hardisty, Rob Velzeboer, Shangwen Yi

Group 18: Candice Miao, Romee Sun, Xiaoxi Xu, Michael Ruizhe Zhang, Sisly Lyu

Product Background

Introducing the Product

- Known for its:
 - Iconic handle and straw lid
 - Keeps drinks cold for up to 11 hours
 - Fits in car cupholders despite its size
- It quickly transitioned from a rugged outdoor brand to a fashionable lifestyle must-have, especially among Gen Z and Millennials.

A Sustainable Design

- At its core, the Stanley Quencher is designed to support sustainability:
 - Reusable, reduces single-use plastic waste
 - Made with recycled stainless steel
 - Built for long-term use, not frequent replacement

Research Question & Hypothesis

Question

Does product messaging framed around durability vs. sustainability influence consumers' perceptions and intentions toward the Stanley Quencher H2.0 Tumbler?

Hypothesis

H₀ (Null Hypothesis):

There is **no difference** in consumer responses (purchase intention, perceived value, and recommendation likelihood) between the sustainability-focused and durability-focused slogans, regardless of environmental concern or shopping style.

H₁ (Alternative Hypothesis):

Consumer responses will **differ** based on the type of slogan and individual characteristics.

Methodolgy

Slogans (IV): “Built to refill, not to replace.” (n=151) VS. “Built to last, not to crack.” (n=151)

Dependent Variables:

- **Perceived Performance:** “I believe this product would perform well in daily use.”
- **Purchase Intention:** “I am willing to purchase this Stanley tumbler.”
- **Recommendation Likelihood:** “I will recommend this product to a friend or family member.”

Moderators:

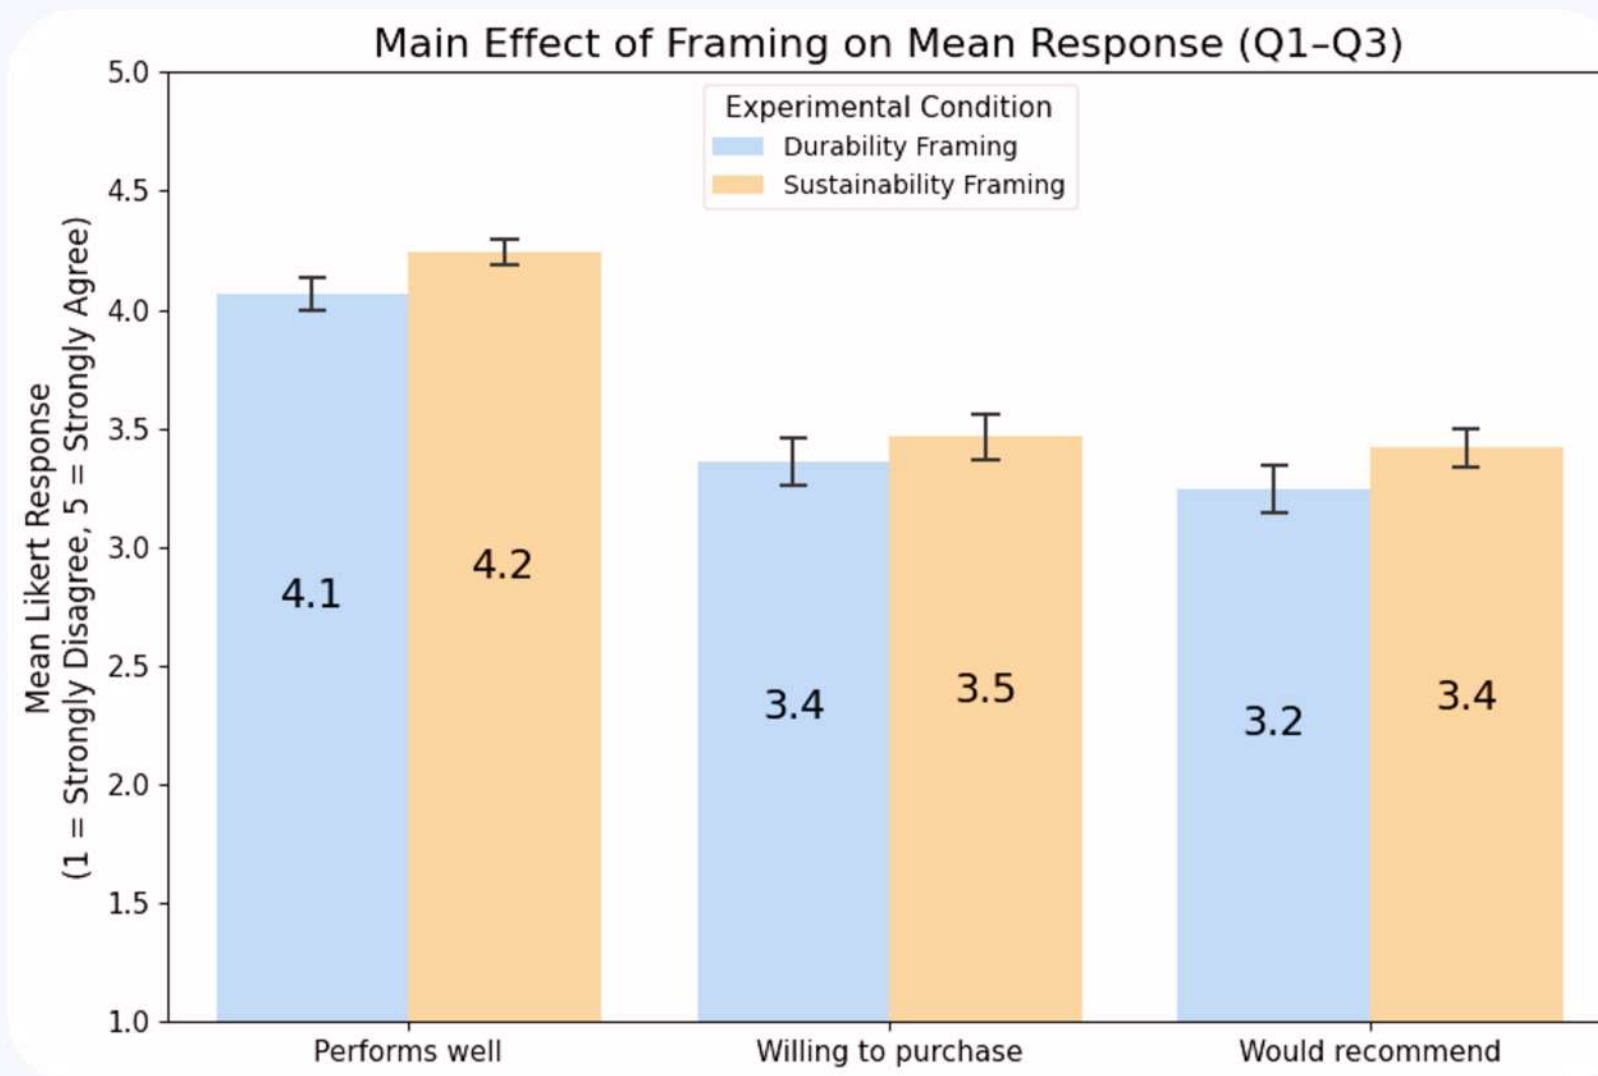

- **Gender Identity:** 1. Woman 2. Man 3. Others
- **Generation (Age Group):** 1. Gen Z (18–26) 2. Millennial (27–42) 3. Gen X (43–58) 4. Baby Boomer (59–77) 5. Silent Generation (78 or older)
- **Environmental Concern:** “Which of the following best describes your attitude toward environmental issues when choosing products?”

Result 1: T-test of Difference in Means

Durability vs. Sustainability Framing

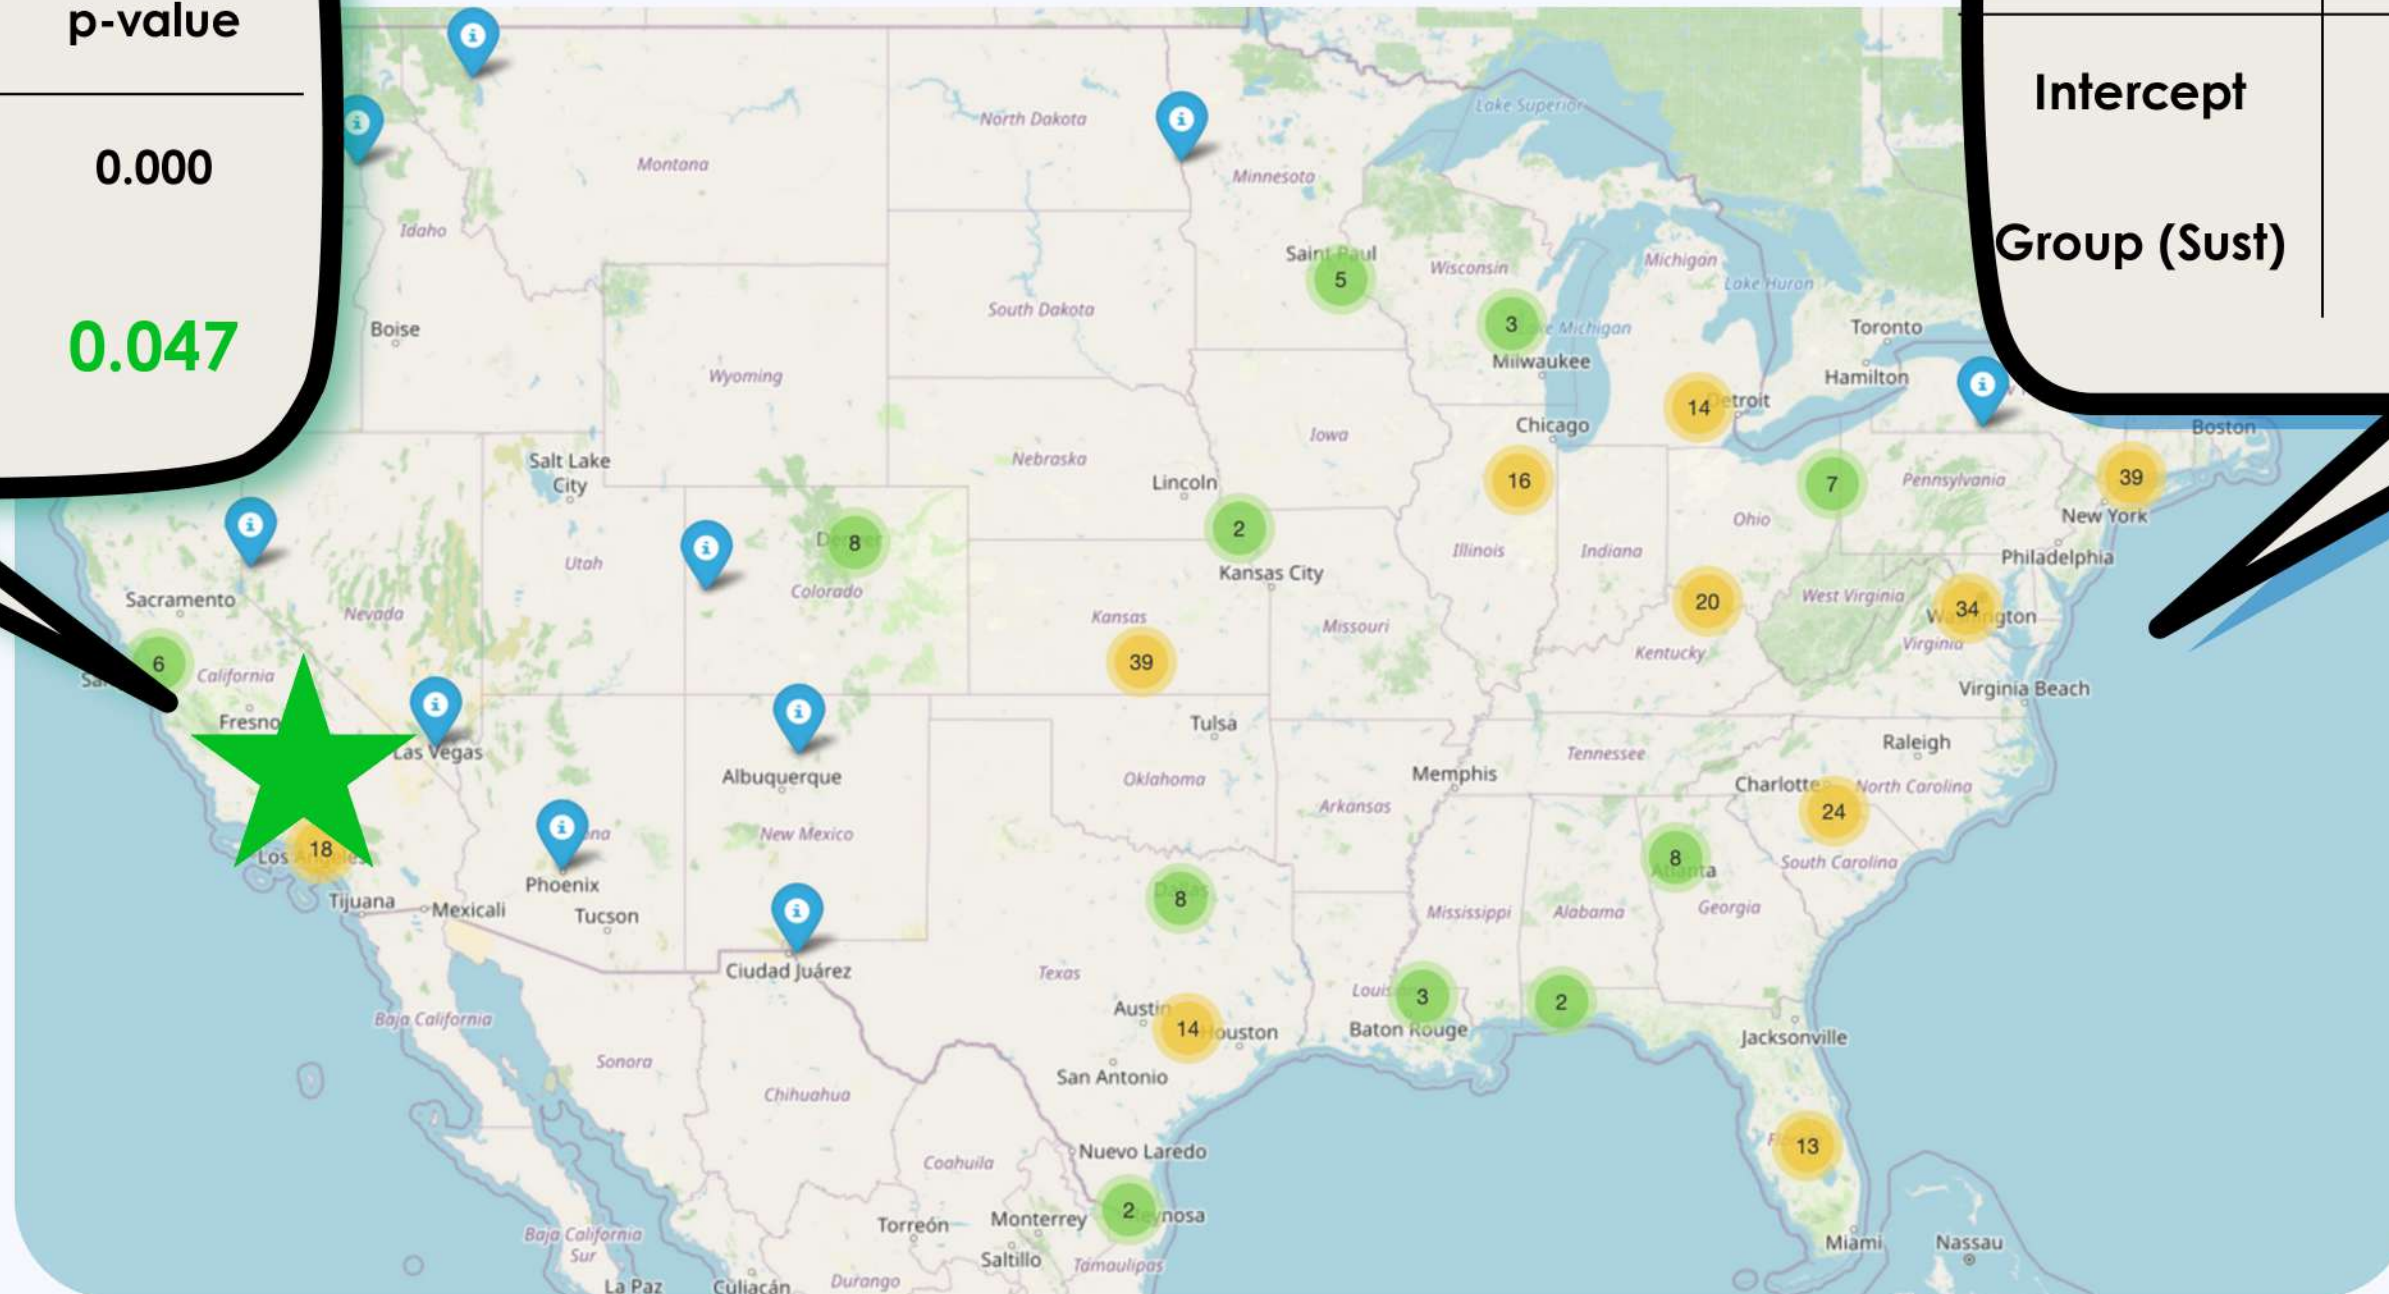

Question	Perceived Performance	Purchase Intention	Recommendation Likelihood
n (Durability)	151	151	151
n (Sustainability)	151	151	151
Mean (Durability)	4.07	3.36	3.25
Mean (Sustainability)	4.25	3.46	3.42
t-stat	-2.033	-0.75	-1.342
p-value	0.043	0.4539	0.1805
Effect size d	-0.234	-0.086	-0.154
Power	0.526	0.116	0.268
Min Sample (for 0.8 power)*	288	2109	659
Significant	Yes	No	No

Note: * the minimum sample size is calculated by G-Power

Term	Coefficient	p-value
Intercept	3.3846	0.000
Group (Sust)	0.8462	0.047

Term	Coefficient	p-value
Intercept	2.7000	0.000
Group (Sust)	0.5778	0.176

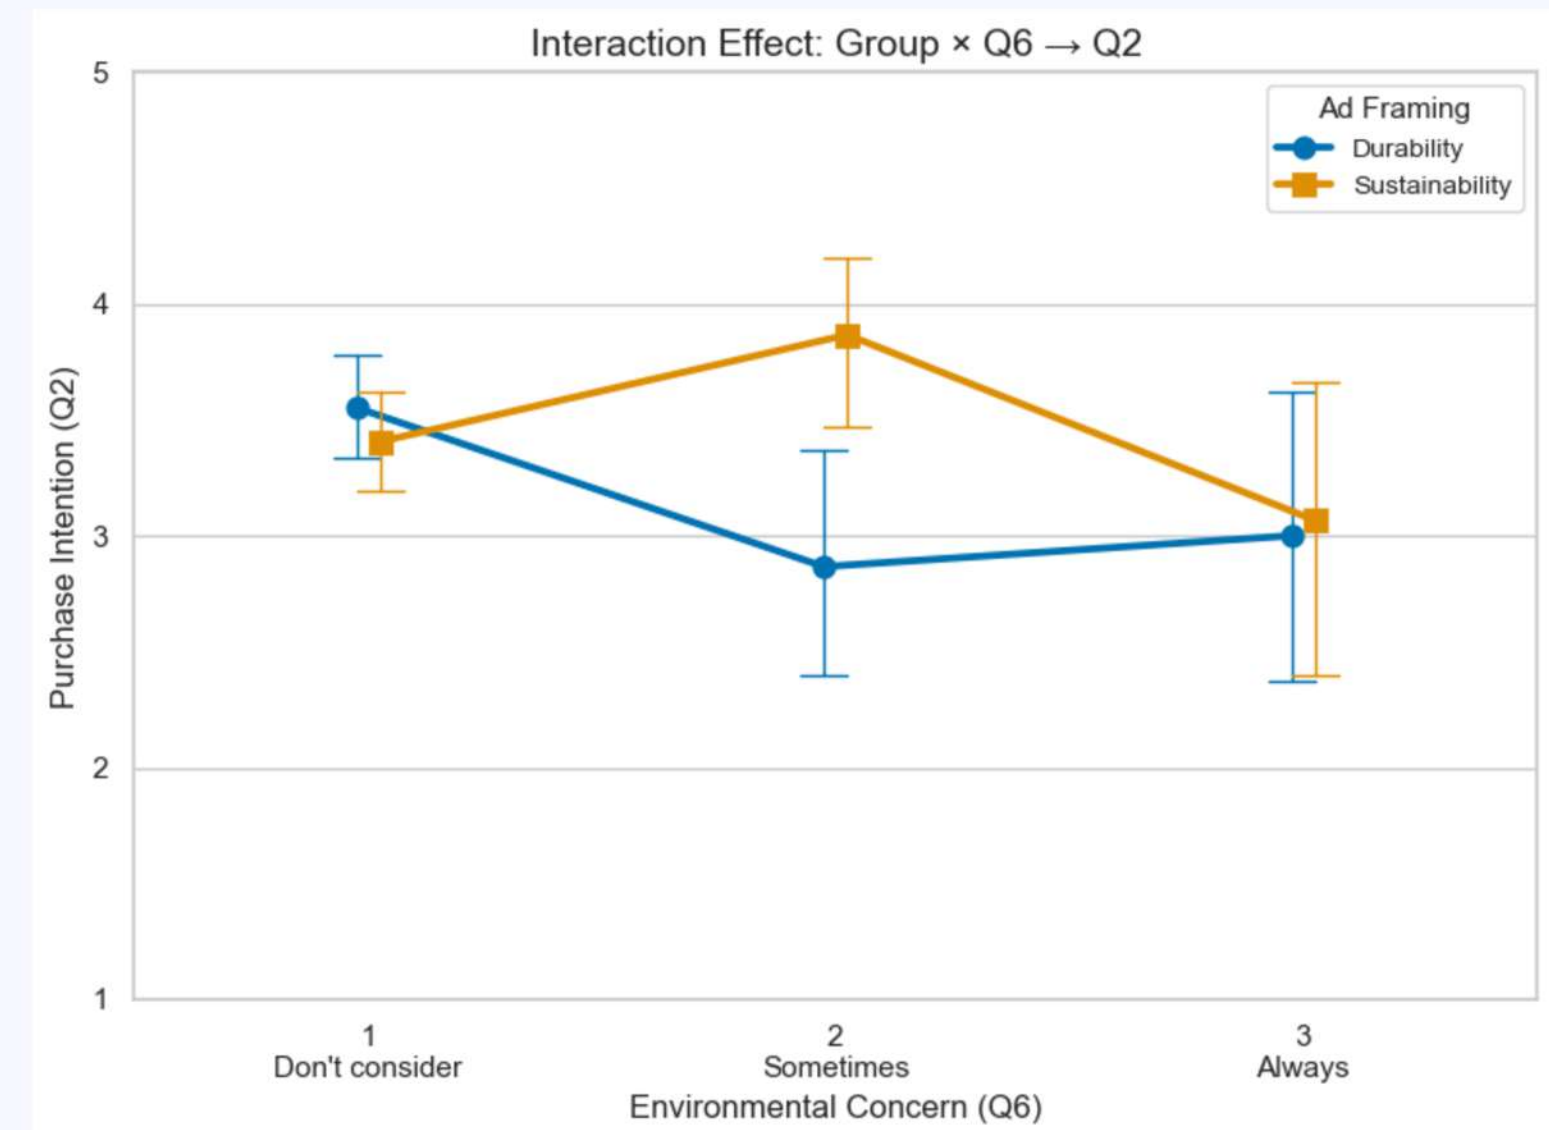

Result 2: Two-way ANOVA

Framings × Environmental Concern(Q6) Purchase Intention (Q2)

Source	Sum Sq	df	F	p-value
Framings	0.8011	1.0	0.550	0.4590
Q6	5.4844	2.0	1.882	0.1542
Framings:Q6	15.3688	2.0	5.273	0.0056

The effectiveness of the ad depends on how much people care about the environment

Result 3: Three-way ANOVA

Framings × Gender (Q4) × Age (Q5) Purchase Intention (Q2)

Source	Sum Sq	df	F	p-value
Intercept	74.068674	1.0	50.525255	0.0000001
Framings	0.306809	1.0	0.209287	0.6476752
Q4	5.768125	2.0	1.967336	0.1417232
Q5	7.125786	4.0	1.215197	0.3044714
Framings:Q4	1.567578	2.0	0.534654	0.4652574
Framings:Q5	4.985236	4.0	0.850158	0.4944370
Q4:Q5	22.753557	8.0	1.940141	0.08774697
Framings:Q4:Q5	35.503810	8.0	3.027324	0.01810673

Conclusion

Research Question:

- Sustainability framing significantly improved perceived product performance
- No clear effect on purchase or recommendation intentions

Marketing Recommendation:

- Focus on sustainability messaging, especially in California
- Leverage regional values to increase message relevance

Research Limitation:

- Small sample size limited statistical power
- Future studies should include larger & more diverse samples
